Figure S1. Bidimensional external preference map obtained by quadratic modeling the overall liking of frequent avocado consumers (n = 116) for seven avocado cultivars, and placement of affective data within the sensory descriptive space. Principal component biplot of sensory descriptive data used in construction of external preference map is shown in Figure 2. Color coding of regions in the map indicate the percent of consumers in each liking category (green regions indicate higher satisfaction, and red least satisfaction).

*Values represent mean ± SE ($n$= 5). Different letters within the same row indicate that means are significantly different, according to LSD test ($p <0.05$).
