**Abstract**

In this study, we present the draft genome sequence of *B. pseudohinzii* BH370 recovered from the trachea and lung tissues of an ICR mouse in Malaysia. The genome consists of 4,474,040 bp with a GC content of 66.4%. Annotation using RAST algorithm displayed 5119 protein encoding and 52 RNA genes. The CRISPR-cas genomic sequences previously reported in *B. pseudohinzii* were identified. The nucleotide sequences of BH370 was deposited into the European Nucleotide Archive under the genome assembly accession number FPJN01000000.

2. Experimental design, materials and methods

Isolate BH370 obtained from the trachea and lung tissues of an apparently healthy ICR mouse was cultured in Mueller-Hinton broth overnight under aerobic condition at 37 °C. Bacterial genomic DNA was extracted using the Nucleospin Tissue Kit (Macherey-Nagel, Germany) according to the manufacturer's protocol. Whole genome sequencing was performed as previously described [1], with minor modifications. Briefly, the genome library preparation was carried out using the Ion Xpress™ Plus Fragment Library Kit (Thermo Fisher Scientific, USA). Genome libraries of 200-base read fragments were prepared using E-Gel® SizeSelect™ Agarose Gel, 2% (Thermo Fisher Scientific, USA). The sequencing template was prepared using Ion OneTouch™ 200 Template Kit V2 DL (Thermo Fisher Scientific, USA) according to the manufacturer's protocol. Amplified Ion Sphere Particles were enriched using IonPGM Enrichment beads (Thermo Fisher Scientific, USA). The raw sequence reads were assembled de novo using SPAdes V3.1.0 [2] as implemented in Torrent Suite V5.0.0. The assembled contigs were functionally annotated with Rapid Annotation using Subsystem Technology (RAST) [3].

3. Genomic analysis

The non-classical *Bordetella* species, *B. hinzii*, has been suggested to cause respiratory infection among laboratory mice [4], and can hence interfere with studies using these animals [5]. Our recent study has suggested that a closely related species could be...
and cas2

BH370, con

BH370 showed antimicrobial resistance, mainly to β

function (Fig. 1). The CRISPR-associated proteins were assigned to subsystem categories according to using RAST. Out of the 5119 protein-coding genes, 54% of the trans-

cidrug resistance protein, MarC.

A total of 5119 protein-coding genes and 52 RNAs were predicted

noted in the genome, including aminoglycoside modifying enzymes

genes (22 genes), to be present in the genome.

This could be in length, comprising 390 contigs with N50 of 20,945 bp (Table 1).

The draft genome of B. pseudohinzii BH370 was 4,474,040 bp in

Bordetella

classified its species identity as B. pseudohinzii. Isolate BH370 showed antimicrobial resistance, mainly to β-lactams [2].

This could be influenced by a number of potential virulence genes noted in the genome, including aminoglycoside modifying enzymes

(3 genes), β-lactamases (2 genes), fluoroquinolone resistant genes

(4 genes), multidrug resistant efflux pumps (8 genes), and the mul-
tidrug resistance protein, MarC. In silico analyses also found bacteri-
ocin (7 genes), invasion genes (9 genes), and heavy metal resistant
genes (22 genes) to be present in the genome.

Table 1

General genome features of Bordetella pseudohinzii BH370.

| Attribute            | Chromosome |
|----------------------|------------|
| Genome size (bp)     | 4,474,040  |
| GC content [%]       | 66.4       |
| Contigs              | 390        |
| ORFs                 | 5119       |
| Number of RNAs       | 52         |

4. Nucleotide accession number

The genome sequences generated in this study are available from the European Nucleotide Archive under the genome assembly accession number FPJN01000000.

Conflict of interest

The authors declare that we have no conflict of interest.

Acknowledgements

The sequencing was made possible using sequencing infrastructures funded by the Ministry of Higher Education - Long Term Research Grant Scheme (LRGS/TD/2011/UM/Penyakit Berjangkit) and the High Impact Research – Ministry of Higher Education Grants (H-20001-00-E000011 and E000013-20001).
