Cognitive and neurobiological vulnerability during remission of Major Depressive Disorder

ACADEMISCH PROEFSCHRIFT
ter verkrijging van de graad van doctor aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus prof. dr. ir. K.I.J. Maex
ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Agnietenkapel
op donderdag 7 februari 2019, te 14:00 uur
door Caroline Astrid Figueroa
gleboren te New Haven, Verenigde Staten van Amerika

CONTENT

Part 1: Introduction

Chapter 1. General introduction

Chapter 2. Vulnerability for new episodes in recurrent major depressive disorder: protocol for the longitudinal DELTA-neuroimaging cohort study. BMJ Open 2016; 6: e009510.

Part 2: Cognitive perspective of MDD vulnerability

Chapter 3. The measurement of cognitive reactivity to sad mood in patients remitted from major depressive disorder. Br J Clin Psychol 2018; 57: 313-327.

Chapter 4. Cognitive reactivity versus dysfunctional cognitions and the prediction of relapse in recurrent major depressive disorder. J Clin Psychiatry 2015; 76: e1306-1312.

Part 3: Neurobiological perspective of MDD vulnerability

Chapter 5. Resting-state network functional connectivity in Major Depressive Disorder; evidence using improved meta-analytic methods. Revision submitted

Chapter 6. Default mode network dominance over the task positive network is not increased in remitted depressed patients at high risk for recurrence. European Neuropsychopharmacology 2015; 25: S399.

Chapter 7. Aberrant default mode network-hippocampus connectivity after sad autobiographical recall in remitted depression. Soc Cogn Affect Neurosci 2017; 12: 1803-1813.

Chapter 8. Decreased ability to access a clinically relevant control network in patients remitted from Major Depressive Disorder. Revision submitted

Part 4: General Discussion

Chapter 9. General Discussion
