The ARRIVE guidelines 2.0: author checklist

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

| Item | Recommendation | Section/line number, or reason for not reporting |
|------|----------------|-----------------------------------------------|
| Study design | For each experiment, provide brief details of study design including: | page 4-5/line 133-143/Methods/paragraph 2 |
| | a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. | page 4-5/133-147/Methods/paragraph 2 |
| | b. The experimental unit (e.g. a single animal, litter, or cage of animals). | |
| Sample size | 2 a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used. | page 4-5/line 133-143/Methods/paragraph 2 |
| | b. Explain how the sample size was decided. Provide details of any a priori sample size calculation, if done. | page 4-5/133-143/Methods/paragraph 2 |
| Inclusion and exclusion criteria | 3 a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established a priori. If no criteria were set, state this explicitly. | N/A, excluding if unable to proceed experiments |
| | b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so. | N/A, No exclusions |
| | c. For each analysis, report the exact value of n in each experimental group. | page 13-14/line 439-479/Figure legend |
| Randomisation | 4 a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence. | page 4/line 134-135/Methods/paragraph 2 |
| | b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly. | page 7/line 207-211/Methods/Statistical analysis |
| Blinding | 5 Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis). | N/A, no blinding applied |
| Outcome measures | 6 a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes). | page 7-10/line 214-316/Results |
| | b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size. | page 7-10/line 214-316/Results |
| Statistical methods | 7 a. Provide details of the statistical methods used for each analysis, including software used. | page 7/line 207-211/Methods/Statistical analysis |
| | b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met. | page 7/line 207-211/Methods/Statistical analysis |
| Experimental animals | 8 a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight. | page 4-5/line 133-149/Methods/paragraph 2 |
| | b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures. | page 4-5/line 133-149/Methods/paragraph 2 |
| Experimental procedures | 9 For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including: | page 4-7/line 133-204/Methods |
| | a. What was done, how it was done and what was used. | page 4-7/line 133-204/Methods |
| | b. When and how often. | page 4-7/line 133-204/Methods |
| | c. Where (including detail of any acclimatisation periods). | page 4-7/line 133-204/Methods |
| | d. Why (provide rationale for procedures). | page 4-7/line 133-204/Methods |
| Results | 10 For each experiment conducted, including independent replications, report: | page 7-10/line 214-316/Results/Figure legend |
| | a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range). | page 7-10/line 214-316/Results/Figure legend |
| | b. If applicable, the effect size with a confidence interval. | page 7-10/line 214-316/Results/Figure legend |
The Recommended Set

These items complement the Essential 10 and add important context to the study. Reporting the items in both sets represents best practice.

| Item                        | Recommendation                                                                 | Section/line number, or reason for not reporting |
|-----------------------------|--------------------------------------------------------------------------------|-------------------------------------------------|
| **Abstract**                | Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions. | page 2/line 35-58                               |
| **Background**              | a. Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach.  
                               b. Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology. | page 2-4/line 62-121                             |
| **Objectives**              | Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested. | page 4/line 123-124                              |
| **Ethical statement**       | Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification. | page 4/line 128-131                              |
| **Housing and husbandry**  | Provide details of housing and husbandry conditions, including any environmental enrichment. | page 5/line 142-146                              |
| **Animal care and monitoring** | a. Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress.  
                                 b. Report any expected or unexpected adverse events.  
                                 c. Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this. | page 5/line 151-152                              |
| **Interpretation/scientific implications** | a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature.  
                                       b. Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results. | page 10/line 318-330                             |
| **Generalisability/translation** | Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate). | page 11/line 363-364                             |
| **Protocol registration**  | Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered. | N/A, no registered protocol                       |
| **Data access**             | Provide a statement describing if and where study data are available. | Data sharing statement                           |
| **Declaration of interests** | a. Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated.  
                                     b. List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study. | N/A, no interests to declare                      |
