The ARRIVE guidelines 2.0: author checklist

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

| Item | Recommendation | Section/line number, or reason for not reporting |
|------|----------------|-----------------------------------------------|
| Study design | 1 | For each experiment, provide brief details of study design including: | line 110-120 |
| | | a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. | line 41-45 |
| | | b. The experimental unit (e.g. a single animal, litter, or cage of animals). | |
| Sample size | 2 | a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used. | Fig1, Fig2, Fig3, Fig4 |
| | | b. Explain how the sample size was decided. Provide details of any a priori sample size calculation, if done. | |
| Inclusion and exclusion criteria | 3 | a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established a priori. If no criteria were set, state this explicitly. | Fig1, Fig2, Fig3, Fig4 |
| | | b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so. | |
| | | c. For each analysis, report the exact value of n in each experimental group. | |
| Randomisation | 4 | a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence. | line 110-111 |
| | | b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly. | line 14-18 |
| Blinding | 5 | Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis). | line 14-18 |
| Outcome measures | 6 | a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes). | line 41-45 |
| | | b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size. | line 41-45 |
| Statistical methods | 7 | a. Provide details of the statistical methods used for each analysis, including software used. | line 173-176 |
| | | b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met. | line 173-176 |
| Experimental animals | 8 | a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight. | line 100-102 |
| | | b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures. | line 105-106 |
| Experimental procedures | 9 | For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including: | line 41-45, line 110-120 |
| | | a. What was done, how it was done and what was used. | line 126-127 |
| | | b. When and how often. | line 124-125 |
| | | c. Where (including detail of any acclimatisation periods). | line 124-169 |
| | | d. Why (provide rationale for procedures). | |
| Results | 10 | For each experiment conducted, including independent replications, report: | line 179-225 |
| | | a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range). | line 179-225 |
| | | b. If applicable, the effect size with a confidence interval. | |
| Item                          | Recommendation                                                                                                                                                                                                 | Section/line number, or reason for not reporting |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| Abstract                      | Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions.                                                          | line 35-55                                       |
| Background                    | **a.** Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach. **b.** Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology. | line 36-40, line 41-43                           |
| Objectives                    | Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested.                                                                                        | line 85-91                                       |
| Ethical statement             | Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification. | line 307-311                                    |
| Housing and husbandry         | Provide details of housing and husbandry conditions, including any environmental enrichment.                                                                                                                  | line 100-102                                    |
| Animal care and monitoring    | **a.** Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress. **b.** Report any expected or unexpected adverse events. **c.** Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this. | line 137-138, line 154-156, line 125-126        |
| Interpretation/scientific implications | **a.** Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature. **b.** Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results. | line 229-236, line 262-265                       |
| Generalisability/translation  | Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate).                                      | line 288-291                                    |
| Protocol registration         | Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered.               | line 104-105                                    |
| Data access                   | Provide a statement describing if and where study data are available.                                                                                                                                           | line 301                                         |
| Declaration of interests      | **a.** Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated. **b.** List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study. | line 302-306, line 294-296                      |
