Thank you once again for taking part in this clinical evaluation. Your help is much appreciated!

This section will ask about your experience using the electronic health record (EHR) system (not designed to provide a higher search functionality than simple string search by including natural language processing (NLP)-enhanced search tool). What search functionality are you accustomed to using in your local EHRs?

Please list the types of medical record systems you use regularly to search through EHRs.

For those doctors working clinically (or are recently retired), what specialty do/did you work in day-to-day? (Please enter N/A if irrelevant)

How many years of clinical experience do you have?

What search functionality is designed to provide a higher search functionality than simple string search by including NLP-enhanced search tool?

How strongly do you agree/disagree with the following statements:

- Very useful
- Somewhat useful
- Somewhat not useful
- Not useful
- Very not useful

I was worried about... (Please enter N/A if irrelevant)

Enter your answer

The patients' medical scenarios tested search functionalities was designed to provide a higher search functionality than simple string search by including NLP-enhanced search tool.

How strongly do you agree/disagree with the following statements:

- Very realistic
- Somewhat realistic
- Somewhat unrealistic
- Unrealistic
- Very unrealistic

The data analysts will NOT be linking responses to named individuals.

Please only complete this once you have finished all 3 tasks. Any feedback is helpful so please be as thorough and as honest as you can when completing this questionnaire.

Any final comments on your overall experience?
