Supplemental Digital Content 4.

Total levels of diol metabolites measured in plasma and tissue. **A**, Total levels of dihydroxyeicosatrienoic acids (DiHETEs), metabolites of EETs, in plasma (left) and tissue (right) two weeks after transplantation of engineered skin grafts. Totals represent the sum of 14,15-DiHETE, 11,12-DiHETE, and 8,9-DiHETE levels. **B**, Total levels of dihydroxyoctadecenoic acids (DiHOMEs), metabolites of EpOMEs, in plasma (left) and tissue (right). Totals represent the sum of 12,13-DiHOME and 9,10-DiHOME levels. Plotted are mean values + SEM. Significant differences are indicated by asterisks (*, p < 0.05).
