Abstract

Migrant and minority health has always been an issue of special concern in public health. While migration is not a new phenomenon, the number of refugees and migrants across the globe grew rapidly in 2015, with large numbers from the Middle East and Africa. Furthermore, the recent migrant crisis in Europe—sparked by civil wars in Syria and Libya and continuing conflict in Iraq and Afghanistan—has escalated to the level of a humanitarian emergency requiring immediate action. We conducted an international workshop on migrant and minority health in Salzburg from 3 to 9 April 2016 to examine migrant and minority health issues in greater depth, sponsored by the American Austrian Foundation and in cooperation with the Association of Schools of Public Health in the European Region (ASPHER) and Public Health Reviews (PHR). To continue this discussion within the academic literature, PHR’s special issue on migrant and minority health includes articles from conference participants and other experts in medicine and public health from the European region and beyond.

Informed by the contribution of senior representatives of the European Union, the International Organization for Migration (IOM), Médecins Sans Frontières (MSF), and public health practitioners and investigators from over 30 countries, this editorial summarizes recommendations of the conference participants for improving migrant and minority health in Europe. They include (i) developing a conceptual framework for health care intervention for migrants, (ii) oversight and coordination of migrant and minority health activities, (iii) reaching a consensus on implementation practices, and (iv) mobilizing sufficient resources for addressing the health needs of migrants.

Keywords: Migrant health, Minority health, Europe, Public health

Introduction

The American Austrian Foundation and PHR-ASPHER conducted an international workshop on migrant and minority health in Salzburg from 3 to 9 April 2016.1 Public Health Reviews (PHR) is now publishing a special issue on migrant and minority health, and the conference participants included both authors of articles for this special issue and representatives of the Association of Schools of Public Health in the European Region (ASPHER) member schools across the European region.

Migrant and minority health has always been an issue of special concern in public health. The recent migrant crisis in Europe—sparked by civil wars in Syria and Libya and continuing conflict in Iraq and Afghanistan—has escalated to the level of a humanitarian emergency requiring immediate action [1, 2]. While migration is not a new phenomenon, the number of refugees and migrants has grown rapidly in the past year, with large numbers originating from the Middle East and Africa. As of January 2015, the Office of the United Nations High Commissioner for Refugees (UNHCR) counts a total of 13,685,607 refugees worldwide and lists the total population of concern at 54,945,467 [3]. In Europe, UNHCR and the International Organization for Migration (IOM) estimate that over one million men, women, and children arrived in 2015 [4]; nearly 190,000 additional migrants have arrived as of May 2016, with many more continuing to make the arduous journey [5].

To examine migrant and minority health issues in greater depth, the Salzburg Workshop included presentations from senior representatives of the European Union, IOM, Médecins Sans Frontières (MSF), as well as public health practitioners and investigators from over 30 countries in Europe and beyond. Presentations were given on international organizations and also on national experiences with migrant and minority health issues. Workshop participants contributed to one of three working groups examining (i) the political aspects of the crisis, (ii) the public health effects, and (iii) their social implications.

Principles
From the outset, the Workshop participants recognized the following internationally sanctioned UN declarations and conventions as the foundation for understanding the current migration crisis: the 1948 Universal Declaration of Human Rights [6], the 1948 Convention on Prevention and Punishment for the Crime of Genocide [7], and the 1951 Convention Relating to the Status of Refugees—including the 1967 Protocol Relating to the Status of Refugees and Resolution 2198 (XXI) [8]. These documents establish the international norms of human rights, protection from genocide, and the rights of refugees. Despite these standards—many of which emerged in response to the bitter and tragic experience of World War II and the Holocaust, including the refugee crisis in its aftermath—genocide and forced migration continue. The current migration crisis in Europe has led to a renewed global commitment and a re-doubling of efforts to substantiate the rights of individuals seeking refuge from conflicts in the Middle East, Africa, the Balkans, and other parts of the world.

Key issues
Four key issues were identified to address migrant and minority health: (1) development of a conceptual framework for health care intervention, (2) oversight and coordination of migrant and minority health activities, (3) consensus on implementation practices, and (4) mobilization of sufficient resources. Figure 1 illustrates how attention to these key issues contributes to the coordination of migrant health policy.

A conceptual framework for addressing migrant health care interventions must consider and harmonize both health care and public health policies and practices. International organizations have a fundamental role to play in the oversight and coordination of migrant and minority health. Effective leadership from international organizations is critical, particularly for monitoring health and for coordinating health
responses across borders. Achieving a consensus on implementation practices, such as a standard set of international health guidelines, could better facilitate communication between health professionals and ensure that theoretical principles are translated into clinical practice in a way that is both consistent and evidence-based. Finally, sufficient resources must be dedicated to providing public health protection and medical care to those in need. This includes educating policy makers, supervisory and health service staff, and community health workers on the unique health needs of migrants and minorities, which can be informed and facilitated by health care professionals with international experience.

Migrant and minority health includes not only physical health but also mental and emotional health. While the physical and material needs of refugees—shelter, safety, warmth, nutrition, sanitation, and health care—often take priority, the mental and emotional health needs of migrants are just as integral to their well-being. This includes encouraging self-actualization, supporting avenues for self-help, providing opportunities for gainful employment, and fostering a sense of belonging and self-esteem [9]. Help in adapting to a new cultural environment and lifestyle, such as learning the local language, norms, and customs, is vital to successful assimilation and integration of migrants and minorities in a way that preserves their dignity, independence, and self-respect as well as commitment to absorption and inclusion in their host country.

**Discussion and recommendations**

Facilitated by the three working groups, the Workshop participants prepared a summary and draft recommendations related to the political, social, and public health aspects of the migrant crisis. Problem areas identified in migrant and minority health, along with examples and possible interventions, are listed in Table 1.

Public health and its representatives have a duty to ensure the ethical guardianship of global health standards for all vulnerable groups—including migrants—through the use of their many professional competencies across sectors. Public health refers to all organized measures (whether public or private) to prevent disease, promote health, and prolong life among the population as a whole [10]. The WHO states that health is a state of complete physical, mental, and social well-being—not merely the absence of disease or infirmity.
| Problem area                        | Specific problem                                                                                     | Example policy intervention                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Knowledge gap in migrant health   | Policymakers, supervisory staff, and direct care givers lack training on migrant health issues. Community health workers are not adequately prepared to address the unique needs of refugees and their families. | Provide training to public health leaders, including policymakers, supervisory staff, direct care workers, and community health workers Consult migrants and refugees themselves about how best to sustain and promote migrant health |
| Basic needs provision            | Inadequate and/or deteriorating shelter, sanitation, waste disposal, and clean water facilities       | Increase monitoring of water supply and sanitary facilities Increase repair and supply of facilities as needed and feed this information back into plans for preparedness and response |
| Nutritional security             | Inadequate caloric intake of healthy protein, carbohydrates and fats with natural vitamins, minerals, and antioxidants | Ensure provision of vitamin- and mineral-fortified foods Distribute vitamin and mineral supplements, particularly for the most vulnerable migrants including children, pregnant women, and the elderly |
| Infectious disease control       | Changes in the risk, prevalence, and incidence portfolios of infectious diseases, including Hepatitis (A, B, C), HIV/AIDS, malaria, tuberculosis, poliomyelitis, influenza, and other sexually transmitted diseases | Promote screening, vaccination, and treatment among migrant populations Facilitate better health record keeping for migrants Harmonize vaccination policy across the European Region |
| Mental health provision         | Increase in depression, anxiety, post-traumatic stress disorder (PTSD) among migrant populations        | Access to use of mental health services Education, self-help group activities, surveys, and specific interventions |
| Access to medical care           | Emergency care Lack of access to regular medical care, often resulting in an increase in demand for emergency services | Improve migrant access to the health system Curative and preventive medicine interventions |
| Non-communicable disease         | Increased vulnerability to acquiring non-communicable diseases as a result of the migrant journey       | Promote increased education and preventive screenings Improve health monitoring of non-communicable diseases among migrants, particularly through improved health record keeping (both e-records and hand carried printed records) |
| Maternal and child health        | Managing changes in risk for nutritional disorders (including problems with breastfeeding), exposure to violence and trafficking, and other factors affecting women's sexual and reproductive health | Promote micronutrient-fortified (e.g., vitamins A, B, C, D, iodine, iron, folic acid) food staples (e.g., flour, milk, salt) Enhance protection against female genital mutilation, sexual exploitation, and child marriages at all stages of the migrant journey Promote migrant and refugee education programs focused on adapting to norms and standards of host countries Availability and access for pre-kindergarten programs, open public spaces for children’s play, family literacy programs |
| Education and free time          | Increased demand on schooling and education systems for boys and girls                                 | Ensure developmental and intellectual stimulation for children at all stages of development along the migrant journey Improve child development and health monitoring for migrants Semi-structured active free time for play, visiting host-heritage sites (museums, galleries, concerts), organizing local tours, holidays, etc. |
| People with disabilities         | Increased vulnerabilities along the migrant journey, including exposure to violence                      | Improve health monitoring of migrants with disabilities through improved record keeping Promote access to health, education, and employment services for those with disabilities |
Furthermore, health is a human right, based on the principles of justice, equity, and social solidarity. By transcending state boundaries to respond to public health challenges (such as the current migrant crisis in Europe), public health professionals and organizations can promote health for all and advancing well-being on a global scale.

History will judge how this crisis is addressed. The European community must draw from its collective memory of the massive displaced person experience following World War II and the Holocaust and from more recent recollections of the Balkan wars of the 1990s. Europe should be generous in giving humanitarian help for those who respect commonly accepted “European values” based on the principle of solidarity.

Sovereign states have concurrent concerns regarding the massive inflow of refugees, which may include security threats. In response, countries may introduce screening practices and may prefer legitimately documented refugees and survivors of genocidal action in their home countries to other migrants. Many countries will limit total migration to a number that can be managed and absorbed into the society while adhering to international law. We must work collectively (i) to avoid inconsistent practices and the introduction of new border restrictions and (ii) to ensure that international laws, ethical standards, and the rights of migrants and minorities are respected.

Solving the complex problems of migrant and minority health requires us to think through the interests and motivations of a number of actors, including governments, humanitarian agencies and their workers, academics, and the media. The organizational, financial, and human resource allocation needed to meet the health challenges of the current crisis will require high-level coordination at political, professional, and technical levels. Governments must work together with international governmental and non-governmental organizations to achieve consensus and share responsibilities and best practices on how to address migrant and minority health issues.

Addressing the health aspects of the migrant crisis is important because protecting and promoting migrant health is inextricably linked to public health. National governments have already demonstrated an ability to reach agreement on a number of areas concerning the current migrant crisis in Europe. The steps outlined in Table 1 for protection, basic needs, and health promoting activities are critical for addressing the health aspects of the migrant crisis facing Europe today.

### Endnotes

1Prof. Wolfgang Aulitzky (American Austrian Foundation), Laurent Chambaud (PHR), and Robert Otok (ASPHER) brought greetings from their respective organizations. Prof Ted Tulchinsky was the Workshop Coordinator, Mariam Torosyan was the Rapporteur, and Lukasz Balwicki was the Working Group Coordinator. Tina Bregant prepared a summary of the Workshop, and Amanda Shriwise assisted in preparing and editing the report.

### Table 1 Problem areas and possible interventions to improve migrant and minority health (Continued)

| Problem Area | Increased vulnerability to depression, substance abuse, and acquiring HIV and other sexually transmitted infections | Eliminate discrimination and promote equal access to health services regardless of sexual orientation | Provide education of risks and preventative interventions, both along the migrant journey and within the host country |

Acknowledgements
Our thanks go to the American Austrian Foundation and its Director, Professor Wolfgang Aulitzky, for his warm hospitality and support, along with his outstanding staff including Ms. Elisabeth Bourg and others of the provision of hospitality, facilities, and superb organization. We thank Mr. Jonathan Cohen of the Open Society Foundation of New York for participating in the Workshop. Special thanks go to Mr. Robert Otok, Manager of the Association of Schools of Public Health in the European Region (ASPHER) for his outstanding contribution to the organization of the Workshop. Finally, we wish to acknowledge and thank the migrant and minority health workshop participants, listed in Appendix 1, whose presentations on specific aspects of the migrant health crisis informed this piece and especially the Working Group leaders—Catherine Cook, Stuart McClean, Jo Durham, Lisa Ploeg, and Prof. Elisabetta de Vito. This report is sponsored by the American Austrian Foundation in cooperation with the Association of Schools of Public Health in the European Region and Public Health Reviews 30 August 2016.

Funding
American Austrian Foundation conducted the Workshop providing accommodation, travel costs, facilities, staff, and support services.

Availability of data and materials
Provided by presenters.

Authors’ contributions
MT drafted the editorial; TB contributed a summary of the conference proceedings that served as a foundation for the editorial and contributed toward revising several drafts; AS edited the structure and content of the editorial; LB oversaw the submission of working group reports that informed the editorial and offered comments on a number of drafts; TT as moderator of the Workshop oversaw this process and contributed to editing and final revisions of the editorial. All authors read and approved the final manuscript.
