

# CIE Chromaticity Diagram

3D → 2D color space

$$x + y + z = 1$$

weights

$$x = \frac{x}{x+y+z}$$

$$y = \frac{y}{x+y+z}$$

$$z = 1 - x - y$$

## Color Models

\* RGB

color monitors  
cameras

Emitted light

RGB Color Model

Based on a cartesian system

\* CMYK

Cyan magenta  
yellow black  
printers

Reflected light

\* HSI

(Hue, saturation,  
illumination)  
for human

R: 0-255 byte  
G: 0-255 byte  
B: 0-255 byte

Emitted light

ex

>> I = zeros(100,100,3)

>> I(i,i,1) = 255 → only red image

>> I(i,i,2) = 255 → made it yellow

>> I(i,i,3) = 255 → made it white

the color layer itself  
is white

## CMYK Color Model

Expresses reflected light

$$\begin{bmatrix} C \\ M \\ Y \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} - \begin{bmatrix} R \\ G \\ B \end{bmatrix}$$

if  $\begin{bmatrix} R \\ G \\ B \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$  (black) then  $\begin{bmatrix} C \\ M \\ Y \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$  Black

if  $\begin{bmatrix} R \\ G \\ B \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$  white then  $\begin{bmatrix} C \\ M \\ Y \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$  white

K = Black
