Projects Developed by JackNJill Solutions:

1. **Smart Automated Dairy Driven by IoT:** This project revolutionizes the dairy industry through complete process automation using IoT technology. It features real-time monitoring of dairy operations, automated milking and feeding systems, and quality control and assurance.
2. **Dairy Industry Bulk Sales System:** A bulk sales system for managing large-scale sales transactions and distribution in the dairy industry. It includes order processing and tracking, customer and distributor management, and automated billing and invoicing.
3. **Book My Court:** A booking system for sports courts in Oman, enabling users to find and reserve courts online. Features include court availability management, online booking and payment, and user profiles with booking history.
4. **Estate Management System:** Developed to forecast revenues of coconut estates in Malaysia, aiding management in predictive analysis of investment versus yields. It offers MIS reports on predictive analysis and pre-alerts on crop maintenance.
5. **Bulk Procurement Automation System:** Automates the bulk procurement process to ensure timely and cost-effective purchasing of raw materials and supplies. Key features include supplier management, purchase order automation, and real-time inventory updates.

6. **Retail Sales Management System:** A comprehensive system to track and manage sales transactions, inventory, and customer data seamlessly. It integrates point of sale (POS), inventory management, and customer relationship management.
7. **Medical Inventory Automation System:** An automated system for managing medical inventory, ensuring accurate tracking, and timely replenishment of medical supplies. It provides real-time inventory tracking, expiry date monitoring, and automated reordering.
8. **Restaurant Management System:** Developed for Papa John's in the USA, this system aids management in predictive analysis of investments versus yields. It features MIS reports on predictive analysis, pre-alerts on crop maintenance, preferred crops based on soil types, and suggested seeds based on season and geography.
