"The next century decides whether humanities short story in the universe ends, and the only known consciousness perishes or flourishes. Our collective actions decides the fate, there is nothing more worthy of our time than fighting for life to persist and consciousness to expand."

"Web3 tiktok will be different. Transparent algorithms and an ability for users to mutate what the algorithm feeds them.

The meme that can be told is not the eternal meme.

The tao that can be memed is the eternal tao

A whole new meaning to AI's capability to predict next token

I don't think this hackathon participant listened when I told him to build this a year ago, but he should have.

Congrats on launch"

Humans will continue to be less and less in the loop. Convenience always wins, and the convenience of stating a goal to your device and having it accomplish it as your executive assistant is the future. "

Too real Highly recommend starting creator league, easy to get 300m+ following to show up Just make sure deliverables are super clear in contracts for influencers.

The rate at which persistent people can learn, and create a niche app is unlike ever before. I've hired over 60 people this past year without looking at a single resume or doing an interview.

We simply give a challenge to build a full MVP of the startup we are looking to create and let thousands of people compete for salary + equity!

Its what I wish I had access to compete in when I was young, and its amazing to bring it to life now.

I first applied to Thiel Fellowship with Jim O'Neill in 2017, and to be on the other side, helping to find undiscovered talent is incredible. Jim is an amazing human and bouncing board for ideas and direction and I cant wait to touch down in SF in two weeks to work more closely together.

3D Render of the first order of our home robot we've got in production. First unit at the end of nest month :)

Robotics is not priced in.

The greatness of persistence and belief will continue to rise in value. Swapnil Sharma has been an amazing leader of the OvaDrive Ai 2nd brain project and continues to impress me with his hard work and willingness to tackle new hard problems.

The future of social, solving the present problem of Ai alignment.

Engagement algorithm -> Inspiration Algorithm

Maximize extraction of user -> Maximize Value for user

Doomscroll -> Bloomscroll

Many ads -> no ads

Video Editing will never be the same.
"Sora" by OpenAI doesn't just generate simple AI videos, it can also edit videos.

Video-to-video editing using diffusion models allows Sora to transform styles and environments in input videos based on text prompts

Underhyped release. Underhyped capabilities.

Foresight has never been more valuable and the value of it is going exponential.

Important work. New institutions to help the visionaries take flight with their visions.

One thing I stole from Nick that was very well said "I want to raise as many people up Maslov's hierarchy of needs as possible"

Social media today will be looked at as the cigarettes of our generation. We have god-like technology aimed at our minds to try and engage with us at all costs.

We platform crazy, and filter the globes information towards the bottom of the brainstem.

This is the source of controversy, and probably so much more. Really excited about Empowerverse and the idea of flipping that paradigm on its head.

This next step in computer evolution will be obvious in 2 years.

It's been a while since I've completed my PHD in Dropping Out, Completed After 1 Year, at University of Arizona.

My deal with my parents was that if I could start having my business make more money than them they'd not disown me for going and being an entrepreneur 😂

I actually did that with Betarian, my cryptocurrency exchange but shut it down after losing my entire savings and profit from a organized crime attack which used fake American Passports to sign up accounts in the name of stolen bank accounts. That was 2017 and I had done half a million in revenue in the matter of months as the first place to offer Paypal to Ethereum.

Realistically this should've gotten funding like crazy and we would have changed our buy limits, but venture capital was so foreign to me I did not a single soul who had raised funding. Now that Im in SF its an entirely different story.

This is inefficient...

Switching the dynamic, and reaching out to potentially great founders and finding a way to de-risk their path is such a better methodology for venture capital. It's what I just recently did for Thaneem Rayan to run Employer Grants.

Proof of this failure is being scouted by many colleges for football, flown out, etc for an industry that makes far less money than intrinsic innovation. Yet making half a million in web3 before it was even a big thing got 0 inflow.

Not ever thinking of returning to school now that I'd tasted success of creating something I ended up starting a new business from scratch... from my fraternity house, which scaled into a manufacturing business called Cannafacturer which I sold to Taylor St Group in 2022.

Great to see this team of fresh college graduates building technology that rivals the capabilities of billion dollar companies like humane.

The past few months I've been putting together a team of Ai researchers with the end goal of automating all remote work.

A couple weeks ago I sent a video off to an editor explaining why this fundamental path forward is one of the most exciting in terms of building a company today.

I also believe this capability display is necessary to existentially accelerate the world on the power of Ai, building our collective resilience by furthering the conversation on the implications of the rise of computational based intelligence beyond our understanding.

Building this company is massive fuel for the non-profit companies I've seeded the past coupled years and the Systemic Altruism movement at large.

That being said, if you know any strong Ai candidates, send them my way. We are actively hiring for Workplete

A week ago Sam Altman said that this space is the most exciting to him, and I couldn't agree more.

(1/2) Gpt4 is human-level intelligence in many ways. Like an academia brain in a vat. Giving it access to control our computer via screenshots, is giving it legs, arms and eyes. This seems the most likely path to AGI. I've begun building a team, please refer bright individual

Having extreme foresight = gaining passion to work towards an idea

Problem with being too early is lack of results;

Passion without results = burnout on idea

The world often isn't ready for the idea, and thus someone who starts later wins the defined target market.

In reality a person who started years ahead SHOULD have easily win IF they don't let the conviction in their idea waver based on external results, and are willing to continue to redefine the approach + messaging.

Long term conviction on an idea also compounds interest.

Trust your first principles thinking on future inevitabilities. This is much easier for me using the venture studio model as I've disconnected directly from leadership towards the idea and step in and help across an ecosystem of projects.

What compelled to me start writing this was actually recognizing that "collective large scale coordination" is an ideal that I think has just been "too early".

A lot of people who were once "idealistic" have lost that saying the world is super distracted and so some of these ideas which require large social coordination seem impossible. I often also hear people think the world is too "dumb".

I think instead, this is an inevitability. The holy war will reach an inflection point. The battle of good and evil… where systems that try to keep control finally, ultimately, lose to a revolution of "we the people"

"The goddess of everything else" is one such story about this process.

Terence McKenna: "I think it's just going to get weirder and weirder and weirder and finally it's going to be so weird that people are going to have to talk about how weird it is."

Ai in general will push existential awareness…

Specifically Ai medicine will push the idea of living eternally (which is a massive unlock)

The idea of living eternally is I believe a massive unlock culturally. From belief in its prospect naturally comes an understanding of playing the "infinite game" and what eternal currency is (good karma, relationships, friendships)

It's makes it like we are in the character selection screen and you want a very good character prior to the long DLC.

(You can't get more superhero points once evil is vanquished.)

I don't think living in a manner that you think 100k years in the future is neccesary to become more of a saint, but I'd say it naturally has this effect of making delayed gratification choices more obvious.

Bryan Johnson is capturing this ideological market really well. But I actually think he's not bullish enough, he needs to drop an absolute banger call to arms video. A legendary propaganda piece.

I was a bit TOO early on it after starting (filed as a religion at 18 for the lulz) and longevity has become a lot more accepted worldwide.

Maybe the gifs and memes I put out that reached tens of million of people helped butterfly effect this, idk.

If there's a longevity pilled video editor who sees this, a long form video explaining how ai may unlock the capability to live as long as we want would be a good thing. I feel obligated to let people know since I would want to be told.

And if you've have an idea that you keep thinking is powerful, maybe the world just hasn't been ready for it yet.

Who controls the vibes,
controls the Universe

Memes are the DNA of the human super-organism, influencing our behaviors and shaping our cultures in the digital age.

Memes = Shared Vibes

and its powerful to control the memes because;

Currency = Shared Belief Systems

The unbundling of finance is underway, and the finalization of every concept (meme) is underway.

To speed-run winning the puzzle game of life, create a meme university (thats the plan)

This is essentially the Y-Combinator of distribution which is the ultimate accelerator of an undergoing transition ◻
You just gotta **believe it to see it**.

Here's how I got elonmusk to watch my youtube video

The secret of the universe is we all have more potential than we can ever see.
legacy finance -> shared belief system meritocracy
(The same way we saw legacy media -> attention meritocracy)

Which ultimately transitions from the control of the legacy mafia (worship of money) to a meme world order. (worship of vibes).

I see a holy war on the horizon... but the war is on the lower vibes, and the good vibes will win if you can believe it.

The meme world order is about spreading better vibes to win, and thats pretty cool.

We failed the transition to an attention meritocracy via platforms taking advantage of maximizing extraction rather than maximizing value for us, which remains the most systemic problem in existence today

BUT! In this revolution, platforms now have a tool to maximize empowerment of people, and receive value based on the value they give to humanity allowing a new evolution of memetic internet takeover, focused on platforming empowerment rather than being platforms of extraction to completely change the game.

In summary:
Top V > Top G

Wrote this while listening to a deeper dive on Murad, a meme lord focused on meme pilling people.

For anyone deep diving I filmed an insightful video on the actual economic value of tokens (drawing away from legacy finance) which leads one to see the meme coin supercycle being led by a token like which actually has the core focus of meme-pilling people.

This is because coins at their core are shared belief systems. I wrote this in 2018 and recently had it put live on this website

Tokens like have high multi-narrative potential because of this.

Witnessing my "schizo idea" becoming based as fuck is really quite awesome.

Might send this to my mom and see how it lands, so heres an explanation; Schizo is representative of someone with high variance of future potential prediction, based is the ability for that to connect with the actual reality.

Based Schizos is the neo-meme term for the the philosopher king or the pure fool.

You're not "high iq", your obsessive introspection is stopping you from being authentic and crippling you with a false sense of superiority that you're too important to enjoy the small things in life, too esoteric for the smallfolk to understand, too proud to be happy, and in the end you win the prize of misery and loneliness—lonely not because you're too intellectual but because most people see past how ridiculous your whole shtick is, being "so smart" that you can't even enjoy yourself. You're miserable because you think suffering from self-consciousness is the heavy crown of being "high iq", so you take delight in your woes while secretly resenting or envying those who can just live and be without taking things so seriously. And so, you self-sabotage because you think you deserve your unhappiness. In the end, you get exactly what you deserve.

Not thinking about the self is childlike and pretty OP

Some meme coin will do well in the future based on this

The Experionsor

Meme coins are prediction markets for shared belief systems creating competitions of vibes.

May the best vibe win.

Great Speaking At DNA House in Token 2049 Singapore on my business model of finding dark talent and connecting them with a good idea.

Lots of momentum.

I was pissed when I was young that no one wanted to hire me to innovate, now Im there for my younger self.

The best thing is finding people who are really excited about what you've done and have high conviction about fixing an area where you lack.

This is true on an individual, and organization level.

Made a song for the BrainGecko launch <3

Prophets are meme lords who understand the memeing of life

more people than any other one thing in the world." - Ralph Waldo Emerson Today, we stand at the crossroads of unprecedented technological freedom. Never before have we had so many tools, opportunities, and infrastructure to reshape our lives. The era of the sovereign individual is upon us, driven by the power of these technologies. For the first time in history, Bitcoin offers us non-sovereign, censorship-resistant money. Private entrepreneurs are taking us to space, delivering uncensored TCP/IP to every corner of the Earth. The days of government monopolies over communication are over. We now have military-grade Cypherpunk encryption available as open-source, unrestricted by government ITAR regulations. Having won the crypto wars, these tools are free to export, publish, and share. AI tools empower each of us to become creators, giving us a voice, the ability to parody the powerful, and access to massive intelligence augmentation. Platforms and protocols like X and Nostr allow individuals to speak to a global audience, a privilege once reserved only for politicians, publishing oligarchs, and the royalty of church and state. Leaders of old power structures are terrified by the speed at which they're becoming obsolete. We watch them flail, desperately clinging to the last remnants of control as they fade into irrelevance. Meanwhile, we are capable of placing computers in our brains, digging tunnels through the earth, and arranging atoms so precisely through nanoassembly that we wield the power of gods. We are blessed. Times of rapid change bring turbulent waters, but we can weather the storm. What we need are leaders brave enough to face the winds of change—not fearmongers urging us to cower under the control of

society's middle managers. In the battle between the past and the future, pundits and politicians are nothing more than mid-level managers fighting to avoid a pink slip. The true agents of change are those who resist fear, who build, hack, create, and instigate. They are the true masters of tomorrow, and they see fear-mongering for what it is—morally bankrupt. So, when someone tells you to be afraid, ask yourself: What incentive does this person have for wanting me to cripple myself? Self-immolation through fear is a choice. The future needs you so please choose wisely.

Some people have called Sam Altman the Anti Christ.

That may be reaching, but Open Ai is in fact a false non-profit

The board should fire me, I think thats important " Have you forgotten this? Has power corrupted you?

Quote

The fact that we've never actually made social optimize for empowerment over engagement baffles me, and if there was a physical version of the matrix "prime program" I think that would be it. It creates a new stage, a new competition, a new search, in essence for the holy grail (of vibes).

Depends on how you define the win state, which is why belief in a higher power defines the war between good and evil.

In the godless world speedrun, man tries to make himself god, the other (which I consider right and more enlightened) is recognizing coming from from godhood and optimizing for a holy future for mankind.

Which means maximize good karma, which means working through the people, which means telling the greatest story to the world and being a world teacher.

Asteroid mining falls into the Post-AGI bucket for me, and are more like ways to role play a futurist / forward thinker IMO. As in either a grift or a low iq play.

Sounds cool, but doesn't make sense in practice and by the time it does, it won't matter what you did to work towards it anyways.

Quote

The children yearn for the asteroid mines

And to hack that story into mainstream, do a spin on the Andrew Tate Top G method, but higher vibe.

That's why I'm calling it top V.

Seize the memes of production

Planning on doing this myself, but open sourcing the blueprint because that's karmic maximalism.

Beat me at saving the world and I still win because I got to help you.

It's a non-prophet build.

To maximize prophet, you gotta make others their highest selves.

I'll be doing some sort of game show style accelerator, YC of distribution in near future, LA, SF, Mumbai are hotspots.

Combining the tech vibes of musk, game show style of Mr. beast, impact focus of Buddha to blend the world of capital and attention in a sustainable and globally collaborative nature can help be a tipping point.

Speaking of tips and points, any spiritual person who maximizes it in effect then seeks to conduct a spear ritual in terms of piercing the veil of ignorance aka the heart of moloch.

A government as a GitHub repository

Altruism is low competition and there's plenty of high value cultural shifts left to create.

Doing this at

Love the idea of

Charity designer goods

Status as a service wins when you buy a bag and build a house.

"Only the shaman knows that culture is a game. Everyone else takes it seriously. That's how he can do his magic."

- Terence McKenna

In the future we will have technology that flashes our life before our eyes.

Ai editing your entire camera feed, an Ai agent understanding your life story.

Tell a good one, can't wait to watch your recap ⬜

Anyone can start big things from their house nowadays. This is similar to how the first company I sold started.

This is why Top V's (those who hack and utilize social media for revolution) Will rank higher than on God's hierarchy of deeds. Waking the world up through the hierarchy of needs. Underfunded tbh. This capability is not priced in.

Quote

one weird thing is that people who are addicted to working get the most say about the future of products and culture. but people who work a lot are really strange people several deviations off of the center

⬜ Welcome to the debut of The Future is Now Digest! ⬜ In this inaugural episode, we delve into the in Dubai—a first of its kind! ⬜ Featuring visionary leaders like Brock Pierce of Bitcoin Foundation & DNA Fund, Max & Kevin, co-founders of Memecoin Summit, Jack of MemeLordz, and our own roving crypto documentarian, Miguel Francis-Santiago. ⬜

Social platforms that optimize value for users will win. Engagement Algo is our toxic friend to be replaced with a higher form. Reelz is the best in terms of this because they heavily weighted shares

All judgmental people have a vibrational problem, we need social media platforms that sort for Holy Spirit instead of engagement.

Fate is like a flower,

destined to bloom but with or without rain shower

In believing in a good one,

There is power

It defines your hour

Your moment

Your now

To see the scenes ahead which you want in your head

From perception to form

And dreams to the norm

Will we ever stop wanting more?

Should we?

I shan't until there's nothing to do but play

That I've won in an eternal way

Or however long my consciousness can hold onto the day

It's likely we are addicted to this process of waking up

No life lived ever fills the eternal cup

Can it?

Buddha believes.

From him an idea of a mind at ease

Yet I see a different story ahead

One where only love can keep away from the dead

An individual who would never leave a reality without the form of another

Enjoying eternality like an endless summer

And maybe they'll dive into the abyss

Knowing that in infinity,

Nothing could keep them from this.

Let's not forget that children may in heaps as generations continue to join the galactic race

Maybe eternity is truly going to last

And if this is just the beginning

Which I beg you to try and see

We need to act differently

And be all that we can be

For it's only just begun, and there's only so many years before the battle is done.

When strength and courage audacity and those other good things, no longer play an important role in the dream

In this shared moment of piercing depth, a bond to not be broken, an eternal team

☐ Fields Forever

the friend in your pocket. No new device needed, no $600 / year cost

Why waste money on the overpriced gimmick necklace (Friend) by when better and more futuristic results can be achieved simply by an app, accessible to all of you, RIGHT AWAY!!

Pretty surprised political banners havnt made a comeback yet, where's the conviction.

I hope to see a new Independence Day, from the two party matrix.

To me it's less about the people, it's around the orgs around them. It's also about sending a message, to ourselves, that we are in control.

What is the fundamental goal of intelligence?

Great Ted Talk on it here

(Intelligence wants to maximize its future freedom of action... the question is how that parlays into our shared reality)

Particularly the largest divide of the future I believe will be on the same contents of this poll, interesting to see how it evolves once it is truly difficult to tell the difference between online personalities.

Ai's Should Have Rights
75%
Ai Will Never Have A Soul
25

Leader of Neuralink thinks the only question that matters is understanding the mind....

Lets stop at using the tech for good and not at decoding all actions and mindreading if we are humanists @elonmusk

I see a holy war on the horizon between the humans who understand they came from god, and the humans who try to make themselves god. (the humans win)

1.4 Billion views for myself on gifs.

Showed that Im the top gif when you search "presidency" to the RFK team and now we're running their channel, massive cultural awareness on RFK incoming.

Who controls the memes controls the universe - Elon Musk

Im in India working with the Birla family to launch a Practical Ai course to 200,000 students.

The course work is almost finalized, and I had Ai draft out the weeks and curriculum as a doc.

Is there any tool out there that allows me to quickly add branding to the document? (Like Ai Pitch Deck Creators)

Which I've tried 3 Ai deck creators and I hate that they dont give you page by page control over them.

I dont want it to really make the deck, I want it to maybe flesh out a page, and I want it to design the pages I already put the skeleton down on.

Bonus points if I can speak to it and make live changes like I do working with employees.

YES!

This is the type of perspective the world needs.

This forms the basis of this idea of enlightened capitalism.

That the most valuable resource to accumulate in the world is good karma, which you can obtain through other by shifting their life eternally which packets of information.

(Buddha was a karma maximalist and every followers good deeds gave him bounties of good karma as he may be directly attributed as much of the reward by causing the shift)

Evil people hoarding wealth just don't understand the game.

Forgive them, for they do not know what game they're playing.

Make sure you tell your friends to perform as many hyper-courageous acts of glory as possible because utopia may be absent of our need for them.

Naval Ravikant Wisdom: A clear mind leads to better judgment which leads to better outcomes. A happy, calm, peaceful person will make better decisions.
If you want to operate at peak performance, you have to learn how to tame your mind just like you learn how to tame your body.
A human is to a smart phone as a household is to a smart robot.

The most dangerous religion is "the world is ending."

We are taught we have anxiety when we should be taught we have THE FORCE.

These 2 things are the same feeling.

I've seen viral many times on tech twitter "a good founder is just someone who's channeled an anxiety problem"

No, it's actually a founder who's in touch with his purpose and so the mislabeled "anxiety problem" isn't attached to, and instead they focus on what matters.

Their why can overcome the cultural baggage, caused by capitalism which makes money from the failure modes of others, manifested as the pharmaceutical industry which diagnoses our discomfort aka WILL as problematic.

Discomfort is LIFE FORCE.
Discomfort is WILL.

THE WILL TO STRIVE, TO ACHIEVE, TO ADAPT.

You don't have anxiety, you have POTENTIAL.

By learning what your "anxiety" actually is, you can learn to love it and hold onto it. (Healing the inner child who didn't have the anxiety label)

There's nothing "wrong" with you.

Again, the anxiety problem is a cultural mis-labeling of the actual fire within your soul, prana, life force, the spark, chi.

When mislabeled it traps you, when labeled correctly it activates you.

The root of our problem is how we identify with our inner fire. The root of our problem is a lack of wisdom. Our perspective has been corrupted by crony capitalists.

The internet preys on our limbic system, makes us more uncomfortable, it's hyper emotional targeting and feeds our destructive system.

The truth, the unlocking of souls isn't shared enough. People won't fully engage with this. Retweeting won't even retweet anymore.

I feel an obligation to make my voice heard. I've unlocked many people near me, but I feel the need to reach more. Unlocking others unlocks myself.

I have ideas which deserve more memetic power:

Take for example the prodemic. Why don't we start sharing the most powerful information we each have? Why don't we start a positive mind virus. The butterfly effect we can all have on our networks with hyper effective vibes.

If you won't DM this to your network, what would you, do that. Let the prodemic move from mind to mind, let it mutate until it takes full form. The prodemic virus exists as a string of words, the right information exists, if you mutate it, we test more variations. We are in the lab, cooking up a vibe for humanity. Explain the prodemic in your own way, infect others with my words, just unlock minds.

Again, anxiety is fake, a mislabeling of your inner life force. An anxiety attack is only an attack because you view it as one.

To me, I get overwhelmingly activated sometimes. I do need to remind myself "this isn't anxiety this is activation"

The system makes more money from labeling it on the side of you having a problem, leading to a cultural failure mode we've created with our natural internal discomfort.

Remember:

One cannot achieve anything with comfort.

Only discomfort moves.

Great Founder's don't channel their anxiety problem, they just don't even view it as an anxiety problem because herein that, lies the problem.

Maybe we need to psyop the word "anxiety" with love and status.

"I love my anxiety"

"Damn he's got so much anxiety he must have a lot of potential"

"I'm feeling too lazy lately I think I need to find ways to get some more anxiety"

Default mode network aka RLHF system aka Ego.

Psychedelics remove RLHF and gives access to the base model.

If you believe in simulation theory and determinism, do you really think the dev could never crack free will?

"GUYS!

Announcing: Superposition

Now on Neurallink.

Now gameplay includes perception based play-state rending.

This adds a whole new layer to the risks and rewards.

The indomitable spirit of life still wins in the end, but the free will component means the earth expansion DLC could be pretty hectic prior to the revival patch.

Remember to focus not purely on $ but karmic points as those are the most valuable up until no-judgement day.

After running some tests we decided to add the "Crypto" patch as it kept being too difficult for players to defeat the players who take control of the monetary system.

The crypto patch allows any player to mint new currency which entirely shifts gameplay given it creates this global "Shared Belief System" meritocracy.

Once the world starts buying the state of the world they want through crypto, it allows momentous movements to happen.

Sadly many sims end up having a ton of gambling done with this tech and ultimately it gives the banking powers good reason to ban it.

Yet we've often seen a crypto comes out which gives this meta understanding of crypto, as shared belief system meritocracy which is the ultimate meta effect of a the community shaping its narrative and sharing the wisdom (that they align with the fundamental value creation metric of crypto which is the ability to pill someone on switching to bet on that shared belief system.

Oh, we've also now decided to make karmic rewards eternal, meaning they can be used in future gameplay to determine better or worse starting points"

This started as a short post... and I guess I love world building. Cannot wait for Ai generated movie basis to help my inner spirit touch the outer world.

oh and personally, I choose to believe in free will because I have no choice in the matter.

At the reccomendation of a friend who called me from this tweet:

Not properly maintained so please excuse an imperfect UX.

Unlocking minds / empowering others.

Karma is the greatest investment, only eternal currency fr fr

The second Ai based driving is probably significantly better from things like comma Ai, regulation will get pushed to outlaw human driving, helping to save the hundreds of thousands of lives lost.

The natural onboarding of humans doing so, with massive decreases in costs and increases in capability will help this transition fully take place.

The final human job will be fighting tyranny

maybe the real treasure was the memes we made along the way

Naval is great but too much tweet sentiment comes from his voicing his own rationalization of not trying to "save the world" which I'll explain as just comfort failure modes.

Similar to the Buddhist failure mode that retreating to monasteries is the wei and not maximizing compassion because it's easier to be "at peace".

In this case I do see truth but not in the way I believe he meant it. This energy is dangerous because of it's high potential and even being slightly off can hurt… like when you build a closed source system of memetic inspiration because that was optimal at the time (all historical religions).

The consistent "stop trying to change the world" bubbling out of him is a classic path where dreamers and visionaries get rich, lose their anxiety/neurotic self fueling their BUILDING self, and let comfort win under the guise of new age spiritual understanding.

What's funny is they're the biggest promoters of stop, because actually they're just voicing their inner dialogue which is now winning over the "GO CHANGE THE WORLD BABYYY" past self.

The nature of our brain has a natural atrophy to idealism, we are coded to move away from it, to seek comfort, and over a long enough time our brains defence modes against discomfort finds thought patterns that successfully quell the storm of the mind.

And get rich especially is a moment when this happens since a lot of the other motivating factors to be idealistic and striving to "change the world" go away.

New comfort modes disguised as spiritual insights comfort you and make you feel above the people still "trying so hard"

Yet the mind is wrong, it just dislikes being on edge, that burns too much "resources".

Your brain is fucking dumb, it doesn't get you've achieved caloric post scarcity.

The best way to stop the death of your idealism is to recognize that YOU are going to talk your energized idealistic younger self out of it over time simply because of of an evolutionary measure.

Don't trust every thought, even if the thought feels good.

Remember the game is alive.

This is the boss battle at the most important time in our species. We can fulfill the greatest work our ancestors dreamed of, building a world where everyone is ok.

I say be delusional about your life's work capability to "save the world", even if you're wrong if it helps you look up, and care for the world its the right things because that's all we all need to do.

—-

He also recently tweeted about being confident in a civil uprising, like brother maybe you should use your massive brain, platform, and influence to counter attack rather than hyperstitioning fear.

But he has too many new age spiritual wisdom quotes to guard against action to reach him.

Probably need to it to reach him in full :)
Don't fall for false profits

Be willing to lose everything.

Human incentive models have historically made aligning with the techno-capital machine more "optimal" for power.

As abundance becomes more obvious, the real scarce currency (power) becomes more clear, our good deeds.

Defecting from the misaligned techno capital machine becomes increasingly obvious as the optimal solution in game play.

So much stored capital in "Long term" assets are going to enter the game as people fully come to recognize this as the end game (of trad capitalism)

Governing Ai may be the most valuable thing to humanity and not getting the airtime it deserves. Even an initial draft proposal would be nice.
@jan_leike

Social media that maximizes value for users is inevitable and part of my life's work.

The buddhas four main vows can be summarized as:

1. I'm gonna save everyone.

2. Fuck everything else.

3. Im gonna be the very best like no one ever was.

4. I will do the impossible.

Which honestly I don't see many Buddhists fully expressing. fixes this

As @elonmusk says who controls the memes controls the universe.

@persistventures built a system to control the memes :)

After ranking to the top of every relevant search term they're at 19 billion views

Been sitting on this while building out our accelerator program but spun it back up and ran it for and Persist.

Guess it's time to become a meme lord.
Robotics will enable cheaper than ever home building, home prices will crash. Land prices will continue to rise.

Land and attention are the only 2 scarce resources and even then, land isn't actually that scarce.

All land divided by all humans today would be 200k sq ft per person.

The creator economy attention market will get overrun by meme tokens.

Attention follows personal value attribution. This is actually a good thing, it evolves us from pure entertainment into caring about the future as we place our bets on it, which are predicated on predicting how others will place their bets which ultimately means bettering on what's best for the world.

Never understood designers, web devs, editors sending resumes and no link to their actual work.

The best resume is a website, a design, or a video respectively.

Facts on the perceived "this Ai is too advanced for the society that's being displayed" initial perception.

Good to remember just how unimaginable this level of Ai was 5 yrs ago.

Eric Schmidt says AI is under-hyped because the scaling laws are continuing without any loss of power

To Persist is to express obsession, care, and belief.

@PersistVentures

Just landed in Delhi ☐

Who should I meet?

(Mumbai soon)
Thanks 4 the feature

Here's some more deep thoughts that may prove to be full of foresight:

The shift from Legacy Media created a better attention meritocracy

The shift from Legacy Finance allows us an opportunity for a better shared belief system meritocracy.

Let's not forget, currency = shared belief system.

The decentralization of shared belief systems is bigger than the shift to a creator economy.

Here's a full loom recording from all the deepest thoughts I have on the decentralization of currency controllers.

In an age where buying execution is straightforward, the right blueprint for success is everything.

Not just the idea, but right idea of the way it will succeed is ☐

I forgot I was scrolling on a new alt for you page not realizing and then went woah why is my feed so bad it's making me feel like shit.

Fear, conspiracies, soft core porn.

@elonmusk What are you maximizing?

Engagement aka extraction.

You say you care about Ai alignment, it's humanities biggest threat, yet the most powerful Ai you run is misaligned?

you wrote a book about this problem, maybe tell your buddy.
AI's already super powerful on global consciousness, maybe we should start with aligning it where it counts.

Love > Fear

We will bloom.

We are all a part of this play, let's play better games.

spearritual.com/spearritual

Get off doomscrolling apps, try the bloomscroll. holyvible.com

Why we havnt built the inspiration / Holy Spirit algorithm is beyond me.

Trad finance will eventually be recognize as Legacy finance.

The massive minting of money truly makes USD a shit coin, it's no joke. The chart may hit different when you view it as an inverted chart of purchasing power.

Legacy media took a similar dive. Obviously then it centralized around private corps and gov still have their hand in the algorithm, but consider it an improvement that we can continue to improve upon.

Exchanges and things like pump.fun are the closest things to social platforms of finance today.

Meme tokens feel like the same process of virality on tiktok in early days. Not too hard, there's a science to it...

But the millions are dollars instead of views.

Once Ai can predict next best step better than you can, will you follow it?

(If it's good enough you will have no choice to, but you will think it was your own idea)

If this analysis is in reference to growth and prosperity taking a meteoric shift away from merit and towards your proximity to the money printer. Then, yes.

Getting off the gold fried meritocracy and http://wtfhappenedin1971.com shows the systemic second order effects.

Currency is to our noosphere as our dopamine center is to our brain. And the money printer is a crack pipe.

Reward system fried.

Luckily legacy finance is following the same path as legacy media.

And my bet is that this will also enable better social institutions. Where maximizing engagement for value can switch to maximizing value for the end user, with cryptocurrency offering a better mechanism for value attribution.

This era of meme tokens may last longer than any other because of the favorability to retail this round.

Solana has tiny fees, dex websites now have automated audits so less rugs, Solana smart contracts are limited and thus the automated audits are trustworthy.

Less rugs, less fees.

One of my favorite questions to ask people… basically what is the ultimate prompt engineering of human consciousness?

Medium + Length Matters

Also the meme matters for platforming everyone else's capability to collectively spawn wisdom.

http://prodemic.org/about

Here's what came from that.

Needs a leader.

Good insights should feel like weights of responsibility which can only be lifted by spreading them to others

"The average person stares at their phone in a catatonic state for 8 hours per day, has zero unique interests, and dies."

This is not right, we can fix this.

Loads of people have been scripted by Ai already. Engagement algorithm based brain rot.

12-15 year old girls have tripled in Suicide rates since the launch of instagram.

The same mind viruses @elonmusk doesn't want to exist are the ones promoted by having an engagement algorithm operate on human psyche. He needs to look to the source of the problem.

The biggest failure mode of Ai Alignment and Safetyists is the 0 focus on Ai alignment in the actually globally transformative medium it exists in today.

Like is that not crazy?

Ai in its most transformative use case today is misaligned and this field is super under recognized, under valued, and under funded.

Doom scrolling is a meme of understanding this colossal misalignment.

Are any Ai safetyists even working on bloomscrolling?

If you want support for Ai alignment from the accelerationists, then unify in aligning it in its current destructive format. It's not about you, it's about your relationship to the larger system. Optimize the organism's resilience. @AISafetyMemes @ESYudkowsky

@Grimezsz idea of Aligned Accelerationism fits perfect with this idea.

@tristanharris is the thought leader of this problem, but understanding the problem is only half the solution.

I'm sorry but your solution to just try to ban tiktok is a waste of your potential to fix the problem. That's just cutting one head off of a hydra.

Bring the better solution to the table if you want people to switch.

Don't want doomscroll? Give people a bloomscroll.

@danielschmach did a pod with Tristan about this being the root of the problem for humanity. Its really good, and makes total sense, reality is a generative system based on what we care about.

@waitbutwhy wrote about this as the root of all problems in his amazing book "A self help book for societies"

@elonmusk can do a lot by switching X maximizing extraction of value of users to maximizing value for users. If he truly cares about humanity I can confidently say this is his next best action. (We are all just predicting next best token like the LLM's)

@jgreenhall likely gets this and has access to reach many mentioned names.

Hoping for some memetic amplification for this space, it's right now a blue ocean, which from first principles may be the most important blue ocean today. @richardcraib ;)

I half don't want to link my solution so that the potential memetic amplifiers I tagged are more likely to promote but look, try it, it's a different vibe than any feed you've had before.

apps.apple.com/us/app/vible-t...

It's not about this app, it's about the existence of the thing. Being a part of the butterfly effect which causes its existence is enough for me.

X can easily win this space, and it gives a unique format for their short form video platform, aligned to humanities highest spirit.

The inspiration algorithm has never been tried.

If we want to avoid doomsday and achieve Bloomsday, we quite frankly need bloomscrolling @JRIngallinera

The holy grail of vibes global search quest has not been spawned @drydenwtbrown

Let's align Ai to human spirit and potential, and turn our devices into what they were always meant to be.

@VitalikButerin will like this because he is based, but a oppurtunity for web3 social to have a winning UVP

@paulg gave great references to the obvious effects of the failed Ai alignment scroll we have today I used in writings on ₕₜₜₚₛ docs.Empowerverse.org

@alexisohanian will like it as a wedge for X or a new platform because it's a true vibe shift that existing conglomerates like tiktok will simply never switch to.

Tagging more Bloomsday Preppers for memetic awareness @Andercot @curious_vii @brockpierce @socialrate @bayeslord @garrytan @_TomHoward @eli_crypto @nick_linck @edchucation

All problems are downstream of vibes, the root of all problems is thus in the way we've developed systems of vibe transference.

A majority of which gets filtered through a super organism maximizing value for itself, unaligned to human spirit and potential.

Bitcoin is just a meme token -@brockpierce

The revolution won't be televised, it will be memed. @jackjayio

"A "Reality Engine" is a computing device that measures an entangled state and collapses it to a definite outcome.

Good ideas are like a half-remembered dream the mind sees as important in forming a coherent narrative from glimpses of a possible world."

@Andercot

The fact that we became interconnected at the speed of light and democracy was not improved is a failure of our capability to form this narrative together.

We choose to help humanity hit its target, by helping humanity aim, and recreating the town hall in a digital form.

A cultural prediction engine which will take in the emotions of people, allow voting, and tokenization of narrative paths. (How to tokenize not yet fully formulated but interested in talking to @desoprotocol @nadertheory)

Focused not just on prediction like Manifold, but on manifestion. So that we can not just have awareness of the dream, but where we want the dream to go.

WeMotions.App

The Blueprint On Here Runs Through The Attention Accumulation System

--

Attention -> Shared Belief Software -> Shared Belief Manifestation -> Shared Benefit -> More Collective Belief -> More Collective Attention.

--

Prediction markets are based but missing this key aspect of collective willpower channeling.

When crypto truly takes off predict next best token is going to become even more p(relevant)

Stop asking for their p(doom) and start executing on pathways to realize the p(bloom)

You'd think rationalism and stoicism would go hand in hand.

Find the others, execute a plan.

Ai pilled people are pushed to two extremes.

Acceleration VS. Alignment

Few think wholeistically to recognize it's about alignment in the present

Ai is transformational on a global scale through social media Reccomender algorithms and we are yet to builds ones that maximize value for us, rather than steal our attention from us.

This is important.
Not to be a jerk on accelerationism, its just if you derive effective acceleration you find the true meaning is to be an effective jerk

Jerk the world towards acceleration of empowering the people… that's wholey.

Studios win in this game.

Putting together a chat of venture studio owners and those who may want to run one in the future comment if you want to be added.

Through years of watching sci-fi I have come up with some awesome movie ideas. Particularly in what I consider to be a "white mirror" category.

For anyone else who has those ideas, it seems inevitable that the first Ai movies have the potential for worldwide distribution and have a memetic effect.

Particularly a movie which is "meta" showcasing humanity in this time, the challenges we'll face and the ways we'll come together to win.

Venture studios are undiscovered talent search and enabler machines.

In a time where a single person can create a game-changing company, experts in idea mazes leverage the venture studio model to maximize impact.

The studio which empowers worldwide potential, bringing systems of world empowerment to a global audience, wins the light-cone.

Could there be a company worth $10B managed and run by a team of 10 people or less?

More possible now than ever.

Close to source > Closed source

And in the end the love you take is equal to the love you make - The Beatles

EVERY SINGLE DAY more people take their lives than Israel has lost this entire Hamas war.

At least people at the festival were enjoying what life had to offer rather than feeling so apart from it they took their lives.

"The current thing" and cancel culture is a part of reactionary culture stemming from misaligned engagement farming Ai. Even my own line "at least the festival people were enjoying life" was an engagement bait to increase the reach of this thread. We all perform for the stage thats built. When we do not platform solutions, but instead platform attention farming, we hurt the world. A kingdom divided cannot stand.**

With all our growth in GDP, its terrifying to see that since the "Smart" phone, the world has taken a scary trajectory in suicide. The smarts of our phone, of Ai, are misaligned to our potential.

"In most cases, the increases in indicators of poor mental health have been larger among girls and young women than among boys and young men. Many of these indicators have increased considerably: self-poisonings among 10- to 12-year-old girls quadrupled; hospital admissions for self-harm tripled among 10- to 14-year-old girls; major depressive episode among 12 to 17-year-old girls increased 52%; emergency room visits for suicidal ideation and attempts nearly doubled among children and adolescents; and suicide among 10- to 14-year-old girls doubled"

Many people are calling for Tiktok to get banned , at systemicaltruism we think the solution is not to cut one head off a hydra, but provide abetter alternative which is why we started

Try out "Vible | The Bloomscroll" on iOS and Android to get a taste of an early empowerment feed.
We are working on bringing forth an age of flourishing human aligned recommender systems. We believe solutions are the best way to defeat problems.

@systemicaltruism needs more leaders to be a part of accelerating systemic change.

For example some people hate high status designer, we see a world where a $1,200 bag represents building a house in another country.

If you have ⬜ or ⬜ in your bio, read this.

For those unaware,

Recently two groups have formed on X in regards to an acceleratingly AI powered future.

One camp raises an emoji to pause ⬜, the other full of faith in the frontier wants to speed ahead ⬜.

Geniuses exist in both camps, understanding the most important part of our future is how we treat AI.

Based P
Singer asks, if they are so smart, why can't they get along?

Let's dive in, first to team PAUSE.

This team says AI Alignment is not attained, so compute must be detained.

Now detaining compute isn't the whole team's wishes.

In fact, most people do not want this, yet these extreme viewpoints tend to get traction.

Hmm, that seems important doesn't it? Back to that later.

The fast forward camp also cares alot about how we treat AI, but they think we should treat it as our savior.

Notably, one ☐ founder is trans-humanist. He expects our current human body to go away, touting the inevitability of new "host"s consciousness. Most PAUSE folk fear the immaturity, and lack of responsibility the ☐ team has in regards to the potential downsides of this tech.
As the S/Alt of the earth, we want to thank both sides for CARING about the future, and understanding what's most important.

We propose a treaty between both sides.

Unity after all, especially of geniuses, is all we need as a human race to have a glorious future.

Team Pause is not wrong to care about god-like technology changing human nature.

Let's first recognize that these camps exist because of AI misalignment already.

The goal of this platform we are on is to create two party dynamics, and maximize extraction of attention from them.

This dynamic creates a stage not for solutions, but for rage-bait camps. Yet, given these camps are made of the worlds brightest minds, they both hold a part of the key to a higher common ground.

Accelerating AI alignment in the present, is the highest path for humanity, that is currently being overlooked. We believe AI Mis-alignment is a big reason why decels (and incels) exist in the first place. The opportunity cost of our smart phones using their intelligence to maximize extraction of us is massive.

These super-intelligent algorithms we created to extract from mankind are WORKING.

Having captured a majority, that is ever increasing, of all human uploads and downloads of information.

Again, a majority of all ideas and narratives get sorted through an algorithm that is misaligned to human flourishing.

If you understand this post, you need to understand you are in the top 5% of IQ for humanity globally.

Your capability to DEFEND against this mechanism is far greater especially without growing up with it (yet like me you likely fall prey to increased screen time because of it).

If you want to join this fight like or reply any part of this thread to be added to our S/Alt X group.

LOOK UP ☐

If you want to to get your important life work sponsored, including this mission, including a trip to India with like minded folks:

The comfort of mediocrity tries to rationalize itself.

Work-life balance is only a thing you feel compelled towards when you are not on a mission.

A deep sense of purpose makes comfort, uncomfortable and grit a necessity.

I've been able to hack this sense of purpose back with this "bloomscroll"

Brand is going to matter more than people would like to admit.

Designers and storytellers are going to come at a massive premium. Massive.

Ai is really good at translating English to more effective English.

My recent tweet "Ai is really good at translating english, to more effective english" was mainly liked by people from India!

I realize its even more true for non-native speakers.

Its also been really effective at taking some TPOT ideas and helping me grasp them more fully, even this writing I am sure a non-native english speaker, could find utility in asking GPT4 to "Help me understand this"

Its really really good at making things more understandable by the mass market.

However, I must note that in my recruiting from India its extremely obvious when a base level GPT answer is input. This can be avoided by simply prompting to avoid that

"Return your answer in a format that is natural, human-like, and short and sweet"

Is a good thing to add onto your prompt when utilizing the output for any query.

Wonderment is a human superpower.

We allow ourselves to become jaded and believe we have "seen it all".

In that is a truth, you will see what you filter the world to become what you believe is true.

Every moment of every day is new.

Live in wonderment.

EAcc > EA is simply seen as

Bloomsday Preppers vs. Doomsday Preppers.

Once you see it you can't unsee it

MF'er is building it himself too. This is the lamest take ever given his position.

He could if he wanted to...

Make X optimized for user value, not engagement. (He runs one of the largest misaligned Ai's).

The real Ai safety risk is this winner takes all market being one where the winners truly take all. Alignment to themselves, and their corporation, rather than all of humanity.

Product Leaders > Product Managers

Recently Ive been doing some internal mantra's to hack better mindsets / emotional states.

Or for the Ai nerds, a better context window (ego).

The goal of course is high emotional valence in a positive direction.

I realized that adding a direction to feels did much better than saying its true… for example:

"My spirit is getting higher." > "My spirit is high"

"I'm feeling more and more grateful for the gratitude within me" > "I am grateful"

This makes sense, sense, senses evolutionarily were built to identify MOVEMENT.

Surprised theres no Metaculus of the VC world yet.

Robotic automation will crash the housing market.

Network states will really become a thing once it's economically more viable to move to a modern tech city on new land than existing options.

Yes, that means land is a better long term investment option…

But the best long term ingestion option is your story… this spending on narratives opposing tyranny that would hold back distribution of land ownership to every soul in the future seems best.

There's enough land for us all.

The only eternal moat is empowering others.

As technology goes exponential in capability, virtue goes exponential in value.

All will either be replaced by people using empowerment algorithms apps of the same nature, or if these apps are smart. They adapt to maximizing value for users rather than an extraction machine.

There's some good middle way realness here.

What I think the world actually needs is Effective Jerks over Acceleration.

Where Jerk represents the speed at which acceleration may be changed.

We as a people need the control, this is the alignment of mega corps to mankind, and this necessity doesn't get enough meme space yet.

Follow the middle way, be an ACTUALLY EFFECTIVE ALTRUIST. By focusing on driving functions (causes) versus symptoms.

Shrimp + Bed nets are not systemic. The world needs systemic change.

Ai alignment is not a problem of the future, but today (engagement algo's).

E/Acc and EA are a result of the polarizing social media algorithms.

Engagement algorithms platform not truth itself, but extreme sides of it.

We then think that our theories our proven, because our platforms push for more engaging truths, rather than more empowering ones.

Real truth doesn't help social media stay alive, it helps people.

Social media is aligned to itself, meaning you are a function it is scripting. You are it's coal mine, it wants to hollow you out.

To appeal to your inner critical thinking, but polarize it against another party.

Both sides hold keys.

Accelerate, and a focus on altruism / alignment.

Many members of the groups know this, but only the radical (extreme pure acceleration) from e/acc and (extreme measure of pause) gets platformed because it feeds on human attention.

To think the world is not already controlled by Ai is hogwash.

We have no idea where we could be if information was sorted to empower every human.

Our global organism's nervous system is dividing us, and then we wonder why the worlds so divided????

Right in front of your eyes.

Stay awake.

See the stages for what they are and the people who rise to the top of them for who they are.

People who have become slightly misaligned by the machine. To speak towards their side as best, rather than unifying around the optimal middle way.

That's the golden mean.

And to compete in this market we'll need redirect people's attention to the long term value of following that golden mean. To spread that, we can look to the golden meme.

Environment is the easiest habit changing hack.

Unofficial API's for everything are the future.

Remove the intern from the equation

Natural language Zapier For Everything, that's the future

This world is already abundant with opportunity.

Mainly the opportunity to tell a great story, and play a role model in this changing world.

Your story echoes in eternity,

The only thing you should fear as scarce is your time to act meaningfully with strength and courage.

How to boost Dalle3's performance:
"Take a deep breath and diffuse step by step"

Ai is already transformational, and already misaligned. It ingests a majority of the worlds information, and maximizes the extraction of the end user.

And then we wonder why we are divided?

Assabiya Wins Every Time | The God Of Everything Else

History, is a repetition of the same pattern seen throughout the ages—a group of nomadic tribesmen overturn an existing sedentary culture, a civilization that has become weak and luxurious. What drives the success of the rising tribe is its group solidarity, or assabiya. Its awareness of itself as a coherent people with a drive for primacy is frequently augmented by religious ideology. The stronger the tribe's assabiya, the stronger the group.

indefinite optimism is underrated

Testing twitter impressions views agents on this tweet…

We don't know yet whether we humans are the only stargazers in the universe…

Hiring people is kinda like renting fine-tuned LLM's.

Training data is further fine tuning.

Some people act as fine-tuning agents.

Corporations are first generation AI's

Alright, my agents just sent out the invite, 300 developers joined so far to compete to build the best Ai clone that will take these meetings.

Ai using Humans is my preliminary AGI system.

Manifestation Engine go brrrr

Automation for scheduling calls worked a little too well.

Next up is the agent with my meeting notes to join this.

If you are taking VC calls pitching you Ai agents company, and not your ai agent, NGMI
Too real

Highly recommend starting creator league, easy to get 300m+ following to show up

Just make sure deliverables are super clear in contracts for influencers

If true that conclusion is barely a fragment of the potential restructuring of society as we know it.

Humans will continue to be less and less in the loop. Convenience always wins, and the convenience of stating a goal to your device and having it accomplish it as your executive assistant is the future.

Positive global philosophy vibes.

Take the karma pill psy op.

Getting pilled = Getting psy-oped

Last week I watched a friend use GPT4 to answer questions about his company.

Every question required this flow:
Copy question, switch tab, add prompt, paste question, send, copy results, switch tab, paste

I was surprised to see no universal form filler with GPT integration, so the workplete team and I made it.

It's more than just

grants, accelerators, incubators, but also applying to colleges, filling out quizlets, and online tests.

I believe the biggest opportunity of the future is in building the muscle cortex for existing intelligence to enter the remote workforce. Excited about the future, DM if interested in the space. We are hiring.

We need the anti-elite elite.

Farming the only eternal currency of good karma.

Prophets to have us look past profits and towards vibes.

Really enjoying ReadAi for meeting notes and feedback. Only thing missing is automatic actionable items -> Jira integration.

Any Ai meet/zoom tool doing this?

My experience:

Cool a place focused on doing the most good.

Let me help make this movement bigger...

Have my team at http://GIPHYstud.com make gifs.

12M views.

CEA risk manager reaches out.

Doesn't want mass marketing "x-risk"

Wants only elite grad school students....

Come to realize how ineffective they are, wrong vibes, no storytelling.

Relate to others on this and how too much stuff was focused on symptoms and not causes.

(Focused on control over focus on elevating the organism of humanity as a whole)

Start:

It's inevitable that faith aligns with currency, as currency = where we place our faith.

Centrally controlled assets that can mint freely will never maximize their user based faith.

The US dollar (and all government dollars and expected CBDC's are Shit coins

Creating a currency was previously the power of nation states.

Now in the hands of people, scammers took advantage of those willing to stake their faith in get rich quick schemes.

As the market gets smarter, it requires real innovation.

We can align Ai to humankind…

We must.

There's more than enough charitable funding, a whopping $500 billion dollars a year, there's just not enough charities being public who really care about the efficiency of that capital.

Let's change that

Let's publicly show better spending and stop inefficient fake charities.

20 billion…. And IMO that's a stretch. Working with developers and doing long term contracts can push developments.

582,000 homeless today at $1,000 a month is 582 million.

Yes, there's lots of other problems, but solving them all won't cost 19.5 billion.

This is the final act of the play, the only eternal lasting thing you have is your story.

Make it great. Farm good karma.

Do compassionate Business.

Solve massive problems.

Support massive problem solvers.

This is play in this age of enlightened capitalism.

Bullish on big positive global narratives.

Consensus reality rests upon pillars of belief. Shape the pillars and you shape perceived reality and limitations.

Master myth-makers, meme-weavers and storytellers alter the pillars underlying culture. Change the stories we live by and you change what is possible

Want to learn?

Go build something.

Betting on India Founder's and helping them set up Delaware CCorps to play in American markets is OP.

Just because someone gets a visa and flys to SF shouldn't mean they're worth 10-20x more but that's how it is.

Smaller checks just to get people onto a founder path is ☐

Even with such high engagement, the algo isn't pushing the views like other tweets.

Sadly that's because it's empowering people to leave.

The Engagement algorithm is misaligned Ai

Find people whose energy makes you wired for life.

Those who make you stay up late dreaming…

Step 1: Dream together.

Step 2: Calculate a winning path with a purpose that bonds deep.

Step 3: Run down the path and don't look back.

Step 4: Prophet

Digital Hackathons = Human Powered AGI

Strength is a mindset that becomes more profound over time.

Communities that form around strength / money / power win.

Today its digital, but more societies are forming out into the physical world.
@solarissociety

Especially as construction bots make new futuristic cities cheap.
Bullish on India this next decade and beyond. The culture, population, and underdog play
is a recipe for success.

Best place in the world to turn capital into innovation.

Seriously think about this and recognize that its time to become your highest self. There
is a worldwide cognitive dissonance on Ai and everything we do now to make the
transfer from darkness to light happen positive is maximally important.

I don't like the idea that we are on the event horizon of a blackhole. Science is the study
of cause and effect, so given we understand theres a cause to the universe we must
recognize we are "the cause" trying to become man, and not man trying to become god.

"The anti-entropic principle operates in consciousness. Its operation in human thought
processes can form a basis for morality."

Giving my support for young entrepreneurs to go after this.

Here's the story of how my own "lemonade stand" test turned into manufacturing empire I sold.

In 2017 after I dropped out from my crypto exchange success I got hit with major fraud, and PayPal shut me down...

With my eyes on software, Ai and with infinite existential fuel to become the best I can be, I sold Cannafacturer & the wholesale business.

The journey has continued to prove to me how strong the butterfly effect is, and how important it is just to go TRY.

This is so factual. At U of A I tried joining the entrepreneurship club, turns out no one was building a business only watching Shark Tank.

There's no better way to test an idea than getting what you need together, and trying to make a sale.

You can be a Top G, or you can recognize the G is only a subsection of the vibe scale, and instead shoot for Top V

The age of private sector tech companies competing with government power will be over.

Government power, above tech won't hold steadfast over the next decade.

Let's make sure we do democracy right this time.

We are the ones who get to build the future.

Bitcoin is a religion, Doge is a meme.

The winning currency will be a meme religion.

Lighthearted enough to not be ick.
Based enough to make it stick.

Balaji calls it crypto tribalism.

The founding constitution of the universe must be made.

Let's make sure the one world superpower holds up all souls being created equal.

We have a chance for true liquid democracy and to erase the political class.

May the 4th be with you

For someone worried about Ai risk, Im surprised he is making his own Ai more extractive.

This is a terrible metric and represents misaligned Ai to humans.

This pushes content that feeds the bottom of the brain stem.

Dogmatic groups with different pitches on "How To Save The World" has been around since before we wrote history books, yet theres never been a clear path solution to rally behind.

Now, a couple are becoming clear as points that we should become zealots for....

A Sybil Resistant Liquid Democracy (Every human soul valued equally and no political class)

Aligned Ai (Including the present misalignment of recommender systems on social platforms)

If you disagree with the statement "I will be able to generate Hollywood level movies within 2 years from a basic script"

Can you tell what the bottleneck would be towards this occurrence?

Capitalism is set to burn out, and the financial system of the post-singularity world will be based on good karma. A high-minded respect network for the art piece that each one of our lives represents.

This places good karma as the only eternal currency.

God/Superintelligence also clearly has the capability to farm more good karma than all of humanity combined. Thus... a proper governance system which values every human soul equally is a pretty prescient topic that I am yet to see even a proposed solution.

Clearly sama who started worldcoin and the worldcoin team tiagosada mnovendstern are thinking about this.

Yet the lack of open sourcing the solution for critical feedback, or pushing the problem into public conciousness is somewhat of a concern to me. (Please weigh in)

Funny explanation, kinda like what life is, except attention is the coin and our body is the NPC we operate with our mind.

Can't wait to resume video games after we pass the great filter level on our IRL game.

Main quest first, then side quests into infinity and beyond.

Worth** smh I bought premium on an alt and can't get it here

Even consuming updates daily theres major cognitive dissonance I recognize myself having.

Working to fix this, will book a tattoo artist to come by soon for a permanant reminder.

I've gone the opposite path, founder first and slowly more monk mode applied to life in order to fully dedicate to my mission and maximize fulfillment ☐

Buddhists/Monks are willpower soldiers who can become massively impactful when tuning focus to the real world.

The memes we spread today echo into eternity

Hate the evil not the person

Speak out and be a mover and a shaker now. It may be uncomfortable but comfort never got anyone anywhere.

It's not easy to stick your neck out but the ones that do are revered when the future comes.

1.4 Billion views for myself on gifs.

Showed that Im the top gif when you search "presidency" to the RFK team and now we're running their channel, massive cultural awareness on RFK incoming.

Who controls the memes controls the universe - Elon Musk

It's an honour to have been recognised as one of the 'Top 10 CTOs IN IT - 2023' by CEO Insights.

This motivates me to continue pushing boundaries, challenging norms, and building a tech-enabled future!

Social media today will be looked at as the cigarettes of our generation. We have god-like technology aimed at our minds to try and engage with us at all costs.

We platform crazy, and filter the globes information towards the bottom of the brainstem.

This is the source of controversy, and probably so much more. Really excited about Empowerverse and the idea of flipping that paradigm on its head.

Just got featured on Yahoo Finance for my year old baby Cannafacturer!

We have been lurking in the shadows for a bit. Committing to quality for our existing contracts and preparing ourselves to scale and now it's time to get the word out. $80 1000mg tincture companies should be shaking in their boots. We are offering 2000mg at $5 labeled, shipped, and sealed.

Happy to work together in our outreach and offer 10% commission off revenue of new manufacturing contracts brought by us!
